

# Joel Oguntade Timilehin

## Full-Stack Developer · TypeScript · React · Node.js

Sunderland, UK · +44 7345 127068 · [joeloguntade256@gmail.com](mailto:joeloguntade256@gmail.com)

Portfolio: [joeloguntade.vercel.app](https://joeloguntade.vercel.app) · GitHub: [github.com/Jhay-web52](https://github.com/Jhay-web52) · LinkedIn: [linkedin.com/in/joel-oguntade](https://linkedin.com/in/joel-oguntade)

## PROFILE

Full-stack developer shipping production web and mobile apps in TypeScript, React, Next.js and Node.js. Built a two-sided SaaS with Stripe billing, an e-commerce store taking live Paystack payments, and OrbitTrack, a real-time satellite tracker with a 3D globe and a React Native companion app. Lead Developer on ClariFi NG and MSc Computing student at the University of Sunderland, researching AI-based CV fraud detection.

## TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3
- **Frontend & mobile:** React.js, Next.js, Vue.js, React Native (Expo), Tailwind CSS, Three.js (React Three Fiber)
- **State & forms:** Zustand, React Query, React Hook Form, Zod
- **Backend & data:** Node.js, Next.js API routes, REST APIs, Supabase (PostgreSQL, Auth, Storage, Edge Functions), Redis
- **Integrations:** Stripe, Paystack, Resend, GitHub REST API
- **Testing & tooling:** Vitest, Git/GitHub, Vercel, Figma, Claude Code, GitHub Copilot

## EXPERIENCE

### Lead Developer – ClariFi NG · 2026 – Present

- Lead a development team building a financial health and decision-support platform for micro and small businesses, from MVP planning through to delivery.
- Set the architecture: a modular monolith with domain modules for auth, business setup, transactions, calculations, insights and summaries, rather than microservices.
- Standardised the backend on Supabase (PostgreSQL, Auth, Storage, Edge Functions) for data, authentication, storage and serverless logic.

### Frontend Developer Intern – Trueminds Innovations Ltd · February 2026 – April 2026

- Delivered 5+ client websites in React.js and Tailwind CSS, from Figma designs through to production deployment.
- Improved front-end performance by cutting unnecessary re-renders and restructuring components.
- Worked in an agile team with senior developers: sprint planning, daily stand-ups, pull requests and code review.

### Web Developer – JhayFx Trading Academy · 2024 – 2025

- Built and maintained the academy's responsive website and Vue.js course features used daily by students.
- Integrated third-party and social media APIs to bring live data into the platform.
- Improved page load times by refactoring JavaScript and compressing assets.

## PROJECTS

### OrbitTrack – Real-time satellite tracker, web and mobile · [orbit-track.vercel.app](https://orbit-track.vercel.app) · Next.js · TypeScript · React Three Fiber · React Native (Expo) · Vitest

- Built a live 3D globe plotting six satellites' real-time positions, with visible-pass predictions for the user's location.
- Proxied the N2YO API through server-side Next.js routes so the API key never reaches the client, and generated dynamic Open Graph images per satellite.
- Built a React Native companion app on the same API that schedules local notifications before a visible pass, with background refresh and duplicate-safe scheduling.

### FlashPromote – Influencer marketing SaaS · React · TypeScript · Supabase · Stripe · Resend

- Built a two-sided marketplace with role-based dashboards: brands create campaigns and browse creators; creators manage applications, pricing plans and workspaces.
- Integrated Stripe payments and Resend transactional email, with Supabase for auth, storage and a real-time PostgreSQL database.

### E-Commerce Store · React · TypeScript · Zustand · React Query · Vitest

- Storefront with cart and checkout processing live Paystack payments; Zustand for cart state, React Query for product data, Zod with React Hook Form for validation, unit tested with Vitest.

### Developer Portfolio Platform · [joeloguntade.vercel.app](https://joeloguntade.vercel.app) · Next.js · Redis · GitHub REST API

- Pulls repositories from the GitHub API with an authenticated admin area (signed session cookies) for curating which projects appear, persisted in Redis.

## EDUCATION

**MSc Computing** – University of Sunderland, UK · Expected 2027 · Dissertation: AI-based detection of CV/resume fraud

**Certificate in Frontend Engineering** – AltSchool Africa · March 2026 · Certificate and transcript at [joeloguntade.vercel.app](https://joeloguntade.vercel.app)

**BSc Industrial Chemistry** – Oduduwa University, Nigeria · 2018 – 2023
