PERSONAL STATEMENT

Frontend Developer with hands-on experience building and shipping production web applications in React, Next.js, and TypeScript, from Figma handoff through deployment. Delivered client work in an agency internship, an interactive platform for a trading academy, and independent products, including FlashPromote, a SaaS integrating Stripe, Resend, and Supabase, and an e-commerce app handling live Paystack payments. Certified Frontend Engineer (AltSchool Africa), currently completing an MSc in Computing. Seeking frontend and remote opportunities in the UK.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Vue.js, Nuxt.js, HTML5, CSS3

Mobile: React Native, Expo, Expo Router

Styling & UI: Tailwind CSS, CSS Modules, SASS/SCSS, Bootstrap, Shadcn/UI, Responsive Design, Figma

Backend & DB: Supabase (PostgreSQL, Auth, Storage, Edge Functions), Node.js, REST APIs

Payments & Email: Stripe, Paystack, Resend

3D & Graphics: Three.js, React Three Fiber

State & Data: Zustand, React Query, React Hook Form, Zod, Axios, Fetch API

Tools: Git, GitHub, Vite, Vitest, Vercel, Postman, Chrome DevTools, VS Code

WORK EXPERIENCE

Trueminds Innovations Ltd — Frontend Developer Internship

Feb 2026 – Apr 2026

- Delivered 5+ production client websites end-to-end in React.js, HTML5, CSS3, and JavaScript, covering layout, responsive behaviour, and deployment.
- Converted Figma designs into production-ready components, catching design/implementation mismatches during handoff before they reached development.
- Debugged UI issues and reviewed code alongside senior developers as part of daily sprint workflow.
- Managed feature branches, commits, and pull requests across live client codebases using Git.

JhayFx Trading Academy — Frontend Engineer

2024 – 2025

- Built and maintained the company's public web presence in HTML5, CSS3, and JavaScript across desktop and mobile breakpoints.
- Developed interactive Vue.js features for daily-use course content, used by enrolled students.
- Integrated social media and third-party APIs to extend platform functionality.
- Refactored JavaScript and compressed assets to cut page load time, improving usability on slower connections.

KEY PROJECTS

FlashPromote (React · TypeScript · Supabase · PostgreSQL · Stripe · Resend · Vite)

- Built an influencer-marketing SaaS connecting brands with creators, using React/Next.js with Stripe, Resend, and Supabase for payments, email, and data.
- Designed dual-role dashboards: campaign creation and creator marketplace for brands; applications, pricing, and workspaces for influencers.
- Integrated Stripe for payment flows and Resend for transactional email, with Supabase handling auth, storage, and the real-time database.

OrbitTrack (Next.js · TypeScript · Three.js · React Three Fiber · Tailwind CSS)

- Built a live satellite tracker on Next.js App Router, rendering real-time orbital positions for the ISS and other satellites on an interactive 3D globe with Three.js and React Three Fiber.
- Designed a server-side API proxy layer to keep third-party keys secure, with polling-based live updates and visible-pass predictions from browser geolocation.
- Implemented dynamic Open Graph share images per satellite via Next.js's image generation API for real social preview cards.

OrbitTrack Mobile (React Native · Expo · Expo Router · TypeScript)

- Built a React Native companion to OrbitTrack with Expo Router, reusing the existing web app's API as its backend with zero new server infrastructure.
- Added live satellite tracking on a native map (react-native-maps) with location-based visible-pass predictions via device GPS (expo-location).
- Implemented local, client-scheduled push notifications (expo-notifications) ahead of visible passes, with AsyncStorage deduplication to prevent double-scheduling on re-fetch.

E-Commerce App (React.js · TypeScript · Tailwind CSS · Zustand · Vite)

- Built a full e-commerce application with cart, checkout, and live Paystack payment integration handling real transactions.
- Used Zustand for cart state, React Query for product data, and Zod with React Hook Form for API-ready form validation.
- Wrote unit tests with Vitest, used Shadcn/UI components, and deployed to Vercel.

CinaVault (React.js · React Router DOM · Vite)

- Built a movie discovery app pulling live data from a third-party API, letting users browse current and upcoming releases.
- Implemented client-side routing with React Router for a fast, SPA-style experience without full page reloads.
- Handled loading states and API error responses to keep the UI stable when data is delayed or unavailable.

EDUCATION

University of Sunderland, UK — MSc Computing

Expected 2027

Oduduwa University, Nigeria — BSc Industrial Chemistry

2018 – 2023

CERTIFICATIONS

AltSchool Africa, School of Engineering — Certificate in Frontend Engineering

March 2026

ADDITIONAL INFORMATION

Languages: English (Fluent)

Availability: Full-time, Part-time, Contract, Remote

Interests: Open-source contribution, building side projects, frontend architecture
